

Process & Technology Optimization

At Efficiency Engineers, we utilize industrial engineering expertise with the latest technology to enable businesses to be more productive and lower costs in order to boost profitability.

- Improvements to save time and money
- Facilitating data-driven decision making

Customized Process Reengineering

Our clients need help to do what they do more efficiently. We assess the current situation, identify improvements, and implement desired changes. Our process engineers have extensive experience in reviewing, documenting, updating, and implementing change to processes from inventory control to streamlining entire companies.

Process Transformation	Process Mapping & Analysis	Quality Management
Production Control Design	Process/Workspace Layout Redesign	Work Measurement/Sampling
Ergonomic Studies	Staffing, Scheduling & Routing Design	Time & Motion Studies

Business Intelligence & Data Solutions

We bring the data management and information control resources. Are you collecting data but unable to use it to make decisions? Expertise in technologies and software allows Efficiency Engineers to provide successful strategies for selection and implementation.

Data Integrity Assessments	Database Design & Management	Data Mining
Independent Software Selection	Software Implementation	Software Integration
Simulation Modeling	Barcode & RFID Implementation	Shop Floor Control Systems
